DETAILED ACTION

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention, for the reasons given in the previous action, hereby incorporated by reference.

While it is understood that other group III elements in addition to aluminum may be included in the III nitride film, the claims are vague as to what is the actual structure that makes up the invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-21 are further rejected, insofar as understood, under 35 U.S.C. 102(e) as being anticipated by Bourret-Courchesne. This reference teaches what appears to be the inventive structure and concept, with a Group III nitride film formed on a single crystal substrate, where the nitride film has a dislocation density of less than $1 \times 10^8/\text{cm}$. In addition, Bourret-Courchesne also teaches that the Group III nitride film can contain aluminum, as claimed.

See the discussion in Bourret-Courchesne at paragraphs [0007] where dislocation densities as low as $1 \times 10^8/\text{cm}$ may be reached. See also, the discussion at paragraph [0019] where Bourret-Courchesne discloses that a Group III nitride film such as AlN may be used, as well.

Since this reference appears to show the same inventive structure, the recited benefits of this structure, such as reduced warpage, would appear to be inherently found in the Bourret-Courchesne structure, as well.

As stated in the previous action, the process limitations included in the instant device claims would not carry any patentable weight in defining the structure of the claimed invention. All of the claimed limitations appear to be met by the Bourret-Courchesne structure.
